

SecureHaze

CASE STUDY
Encrypted Communications

Protecting the Critical Intellectual Property and Competitive Bids of a National Energy Services Company.

A national Energy Services Company keeps intellectual property and competitive bids safe from competition.

Pain Points

- Company's information and communications are targeted by hackers, foreign governments and competitors.
- Needed secure text, voice, video and file sharing communications for employees and contractors spread across the nation and working in the field every day.
- Wanted a solution that used existing desktop, laptop and mobile devices.

Competition

- Considered competition but options fell short for device support, required features and security level provided.

SecureHaze Solution

- Deployed SecureHaze to provide secure, encrypted communications for employees and select contractors.
- App based solution used on existing mobile, desktop and laptop devices.
- SecureHaze provides encrypted text, voice and video, and file sharing for exchanging pictures, drawings, documents, proposals and more.

National Energy Services Company with critical communications

Key Benefits

Provides text, voice, video and file sharing solution for secure communications

Works with existing desktop, laptop and mobile devices, no new hardware required.

Ultra flexible deployment and configuration allows for fast creation and management of new employee and contractor accounts
